

Materials for a bright and efficient future

Nanograde, with offices in CH-Stäfa and GER-Nürnberg, is a leading company in the development and production of high-quality specialty materials for the electronics market. nanograde specializes in identifying and solving material problems in high-margin applications for mobile, display, lighting and energy applications. nanograde's current materials pipeline includes materials for LCD displays, OLED lighting panels and printed solar cells.

Internship (6 months)

Innovation Opto-electronic Devices

Our innovation team is responsible for material and process developments from idea to production. In the position as intern you will be part of a highly innovative team. Our unique materials revolutionize markets and enable products with very specific optical or electronic properties. You will be involved in the realization of material visions from the first idea to the finished product. At Nanograde, we treat interns like full time employees, but for a limited amount of time.

You are a flexible and innovative personality in a bachelor or masters course preferably in materials science, chemistry, physics or similar combined with a passion for materials and electronic devices with lab experience. Furthermore, you enjoy solving problems in a structural, but creative way and you like to work independently in a young and dynamic team. Good knowledge of German and English complete your profile.

Are you ready for the challenge? At Nanograde, you will experience an exciting journey with room for your own ideas in a highly innovative environment with a young and open culture. Samuel Halim, co-founder and CEO, is looking forward to receive your application by email in German or English.
